

1. Introduction

As a cybersecurity student, developing a foundational understanding of threat intelligence is essential to anticipating, identifying, and mitigating cyber threats. This module provided a comprehensive introduction to the core principles of threat intelligence, including its classifications and practical applications in real-world scenarios. Throughout the module, I engaged with several open-source tools—such as UrlScan.io, Abuse.ch, PhishTool, and Cisco's Talos Intelligence platform—to enhance my ability to detect, analyze, and respond to various cyber threats. These tools serve as vital resources for security professionals, enabling proactive threat hunting and informed decision-making in cybersecurity operations.

2. Module Sections

What was TryHackMe's Cisco Umbrella Rank based on the screenshot?

345612

How many domains did UrlScan.io identify on the screenshot?

13

What was the main domain registrar listed on the screenshot?

NAMECHEAP INC

What was the main IP address identified for TryHackMe on the screenshot?

2606:4700:10::ac43:1b0a

Room progress (27%)

Answer the questions below

✓ Woop woop! Your answer is correct

What was TryHackMe's Cisco Umbrella Rank based on the screenshot?

345612

✓ Correct Answer

How many domains did UrlScan.io identify on the screenshot?

13

✓ Correct Answer

What was the main domain registrar listed on the screenshot?

NAMECHEAP INC

✓ Correct Answer

What was the main IP address identified for TryHackMe on the screenshot?

2606:4700:10::ac43:1b0a

✓ Correct Answer

The IOC 212.192.246.30:5555 is identified under which malware alias name on ThreatFox?

Katana

ThreatFox | Browse IOCs

NEW | Hunt across all abuse.ch platforms with one simple query - discover if an IPv4 address, domain, URL, or file hash has been identified on any platform from a centralized search tool. Test it out here [hunting.abuse.ch](#) - and happy hunting!

Highlight All Match Case Match Diacritics Whole Words Phrase not found

The screenshot shows the ThreatFox web application. The main content area displays details for an Indicator of Compromise (IOC) with ID 395319. The details include:

- IOC: 212.192.246.30:5555
- IOC Type: ip:port
- Threat Type: botnet_cc
- Malware: **Kobaloo** (highlighted in blue)
- Malware alias: KALABO
- Confidence Level: Confidence level is elevated (75%)
- AS: AS44559 (THOSTLINE)
- Country: IN
- First seen: 2022-03-15 07:20:31 UTC
- Last seen: never
- UUID: 65d0f100-a430-11ec-a022-42010aa4000a
- Reporter: abuse_ch
- Reward: 5 credits from ThreatFox
- Tags: (empty)
- Reference: <https://bazaar.abuse.ch/sample/5a510bb0ccdac2fec5f13fae389b6900624329303d8ec85190ebf94b60d94e2/>

At the bottom of the page, there is a search bar with the text "212.192.246.30:5555" and a dropdown menu showing "Highlight All", "Match Case", "Match Diacritics", "Whole Words", and "Phrase not found".

Which malware is associated with the JA3 Fingerprint 51c64c77e60f3980eea90869b68c58a8 on SSL Blacklist?

Dridex

The screenshot shows the SSL Blacklist web application. The main content area displays details for a JA3 Fingerprint. The details include:

- Listing Date (UTC): 2018-12-17 07:47:19
- JA3 Fingerprint: **51c64c77e60f3980eea90869b68c58a8** (highlighted in blue)
- Listing Reason: Dridex
- Malware Samples: 241765

At the bottom of the page, there is a search bar with the text "51c64c77e60f3980eea90869b68c58a8" and a dropdown menu showing "Show", "Search:", "entries", "Showing 1 to 1 of 1 entries (filtered from 96 total entries)", "Previous", "1", "Next", and "© abuse.ch 2025".

ThreatIntel2-badr 40min 33s

I counted the “received from” and found the email went through 4 hops before getting delivered.

The screenshot shows a web browser window with the TryHackMe interface. The left sidebar displays a quiz titled "What is the recipient's email address?" with the answer "cabbagecare@hotmail.com" and a "Correct Answer" button. Below it, another question asks for the "Originating IP address" with the answer "204.93.183.11" and a "Correct Answer" button. The third question asks for the number of hops, with the answer "4" and a "Correct Answer" button. The right sidebar shows a terminal window with a green notification "Woop woop! Your answer is correct" and a detailed email header analysis. The terminal output shows the email path: DB9P194MB1386.EURP194.PROD.OUTLOOK.COM (2603:10a6:10:296::24) by AMBP194MB1513.EURP194.PROD.OUTLOOK.COM with HTTPS; Tue, 29 Mar 2022 20:39:29 +0000. I searched the ip from previous task on talos intelligence and found the domain owner details as shown

The screenshot displays a web browser window with multiple tabs. The active tab shows the Talos Intelligence reputation lookup page for IP 204.93.183.11. The page is divided into several sections:

- LOCATION DATA:** Chicago, United States
- OWNER DETAILS:**
 - IP ADDRESS: 204.93.183.11
 - FWD/REV DNS MATCH: Yes
 - HOSTNAME: sc500.whpservers.com
 - DOMAIN: [scnet.net](#)
 - NETWORK OWNER: deft.com
- CONTENT DETAILS:** No established content categories
- REPUTATION DETAILS:**
 - SENDER IP REPUTATION: Neutral
 - WEB REPUTATION: Unknown
- EMAIL VOLUME DATA:**

	LAST DAY	LAST MONTH
EMAIL VOLUME	0.0	2.3
VOLUME CHANGE	0%	
SPAM LEVEL	Critical	
- BLOCK LISTS:** Not Listed

Below the browser window, a quiz interface is visible. It asks the user to answer questions based on the previous task. The first question is: "What is the listed domain of the IP address from the previous task?" The user has entered "scnet.net" in the input field. A green button labeled "Correct Answer" is visible, indicating the user's response is correct. The second question is: "What is the customer name of the IP address?" The input field is empty. At the bottom of the quiz, there is a "Task 7" section with a dropdown menu set to "Scenario 1".

I ran a whois lookup against the ip and found the customer's name as shown

The screenshot shows a Kali Linux desktop environment with a TryHackMe browser window. The browser has multiple tabs open, including 'TryHackMe | Threat Intel', 'Reputation Lookup', 'Threat Intelligence Tools', 'THM Browser-Based', 'PhishTool', and 'Whois IP 204.93.183.11'. The 'Reputation Lookup' tab is active, displaying a 'Room progress (77%)' bar and a list of tasks. The 'Task 7' section is expanded, showing a 'Scenario 1' task. The task instructions ask for the listed domain and customer name of the IP address from the previous task. The user has entered 'scnet.net' for the domain and 'Complete Web Reviews' for the customer name. Both answers are marked as 'Correct Answer'. A notification bubble says 'Woop woop! Your answer is correct'. The 'Whois IP 204.93.183.11' tab is also open, showing a terminal window with SMTP logs. The terminal output includes headers like 'Received: from DB9P194MB1386.EURP194.PROD.OUTLOOK.COM' and 'Authentication-Results: spf=none (sender IP is 204.93.183.11)'. The terminal also shows a '32min 52s' timer.

Answer the questions below

What is the listed domain of the IP address from the previous task?

scnet.net

✓ Correct Answer Hint

What is the customer name of the IP address?

Complete Web Reviews

✓ Correct Answer Hint

I opened the email using thunderbird and found the recipient's email address as shown

The screenshot shows a web browser window with the URL <https://tryhackme.com/room/threatinteltools>. The page displays a task description and a question. The task text reads: "Task: Use the tools and knowledge discussed throughout this room (or use your resources) to help you analyze Email2.eml found on the VM attached to Task 5 and use the information to answer the questions." Below this, a section titled "Answer the questions below" contains the question: "According to Email2.eml, what is the recipient's email address?". A text input field contains the answer "chris.lyons@supercarcenterdetroit.com", which is marked as "Correct Answer" with a green checkmark. A "Submit" button is visible at the bottom of the question section.

On VirusTotal, the attached file can also be identified by a Detection Alias, which starts with an H.

The right side of the image shows a Thunderbird email client window displaying an email from "Le Huong-accounts" (LeHuong-accounts@gmail.com) to "chris.lyons@supercarcenterdetroit.com" dated 12/14/17, 18:14. The subject is "FW: Re: PI no. SO-P101092262891". The email body includes a greeting "Dear all," and a message about a balance payment for an invoice on 14/12/2017, with a reference to a forwarder. An attachment "Proforma Invoice P101092292891 TT slip pdf.rar.zip" (223 KB) is listed at the bottom.

I downloaded the attachment and got its hash using sha256sum and then searched the hash on virus total and got the answer as shown

The screenshot shows a TryHackMe room interface. On the left, a task is displayed with a progress bar at 81%. The task text reads: "Task: Use the tools and knowledge discussed throughout this room (or use your resources) to help you analyze Email2.eml found on the VM attached to Task 5 and use the information to answer the questions." Below the task, a question asks for the recipient's email address from Email2.eml. A text input field contains "chris.lyons@supercarcenterdetroit.com", which is marked as a "Correct Answer". Another question asks for a Detection Alias starting with 'H' on VirusTotal. On the right, a terminal window shows the command "sha256sum Proforma\ Invoice\ P101092292891\ TT\ slip\ pdf.rar.zip" being executed, resulting in the hash "435bfc4c3a3c887fd39c058e8c11863d5dd1f05e0c7a86e232c93d0e979fdb28". Below the terminal, a VirusTotal search result is shown for the file "Proforma Invoice P101092292891 TT slip pdf.rar.zip". The file is identified as a "trojan.noon/fareitub" and is categorized as "trojan". The VirusTotal interface shows a "DETECTION" tab with a table of security vendors' analysis.

Task: Use the tools and knowledge discussed throughout this room (or use your resources) to help you analyze Email2.eml found on the VM attached to Task 5 and use the information to answer the questions.

Answer the questions below

According to Email2.eml, what is the recipient's email address?

chris.lyons@supercarcenterdetroit.com

✓ Correct Answer

On VirusTotal, the attached file can also be identified by a Detection Alias, which starts with an H.

ThreatIntel2-badr

20min 35s

I opened the email and downloaded the attachment and got the answer.

The screenshot displays a web browser window with the TryHackMe interface. The browser tabs include 'TryHackMe | Threat Intel...', 'Threat Intelligence Tools...', 'PhishTool', 'Whois IP 204.93.183.11', and 'VirusTotal - File - 435bf...'. The address bar shows 'https://tryhackme.com/room/threatinteltools'. The page content includes a 'Room progress (86%)' bar, a scenario description, a task instruction, and a question about the attachment name. The answer 'sales_receipt 5606.xls' is entered, and a green 'Correct Answer' button is visible. Below it, another question about the malware family is shown with an empty input field.

Scenario: You are a SOC Analyst. Several suspicious emails have been forwarded to you from other coworkers. You must obtain details from each email to triage the incidents reported.

Task: Use the tools and knowledge discussed throughout this room (or use your resources) to help you analyze **Email3.eml** found on the VM attached to **Task 5** and use the information to answer the questions.

Answer the questions below

What is the name of the attachment on **Email3.eml**?

sales_receipt 5606.xls

✓ Correct Answer

What malware family is associated with the attachment on **Email3.eml**?

The desktop environment on the right shows a dark theme with icons for 'ubuntu's Home', 'Terminal', 'Emails', and 'Thunderbird Mail'. A notification bubble at the top says 'Woop woop! Your answer is correct'. The desktop also shows files like 'Proforma Invoice P101092292891 TT slip.pdf.rar.zip' and 'Sales_Receipt 5606.xls'. The system clock indicates 'Mon Jun 23, 11:04' and the task name 'ThreatIntel2-badr' is visible at the bottom.

I identified the file hash of the attachment using sha256sum and then searched on talosintelligence and found the malware family associated with the attachment

The image shows a web browser window with the URL `https://talosintelligence.com/sha_searches`. The page displays search results for a SHA256 hash. The score is not available. The associated domains are also not available. The detection aliases list includes: `Downloader/XLS`, `detected`, `VBA.Dropper-GX [Trj]`, `VB Trojan Valyma 5569`, `virus`, `malicious confidence 100%`, `X97M/Dridex.A.genEldorado`, `VBA/Agent.AD55tr`, `Trojan-Downloader.VBA.Agent`, `X97M/Downloader.lu (trojan)`, `TrojanDownloader.O97M/Dridex.ALIMTB`, `X97M/Downloader.44710`, `Troj/DocBl-AEMO`, `W97M/Downloader`, `TROJ.FRS (NA103JE21)`, and `[DOWNLOADER] Downloader/XLS Dridex`.

Below the browser window, there is a screenshot of a TryHackMe challenge interface. The challenge is titled "Task 9" and has a progress bar showing 95%. The instructions are: "use the information to answer the questions." The first question is: "What is the name of the attachment on Email3.eml?". The answer is "Sales_Receipt 5606.xls", which is marked as correct. The second question is: "What malware family is associated with the attachment on Email3.eml?". The answer is "Dridex", which is also marked as correct.

On the right side of the challenge interface, there is a terminal window showing the following commands and output:

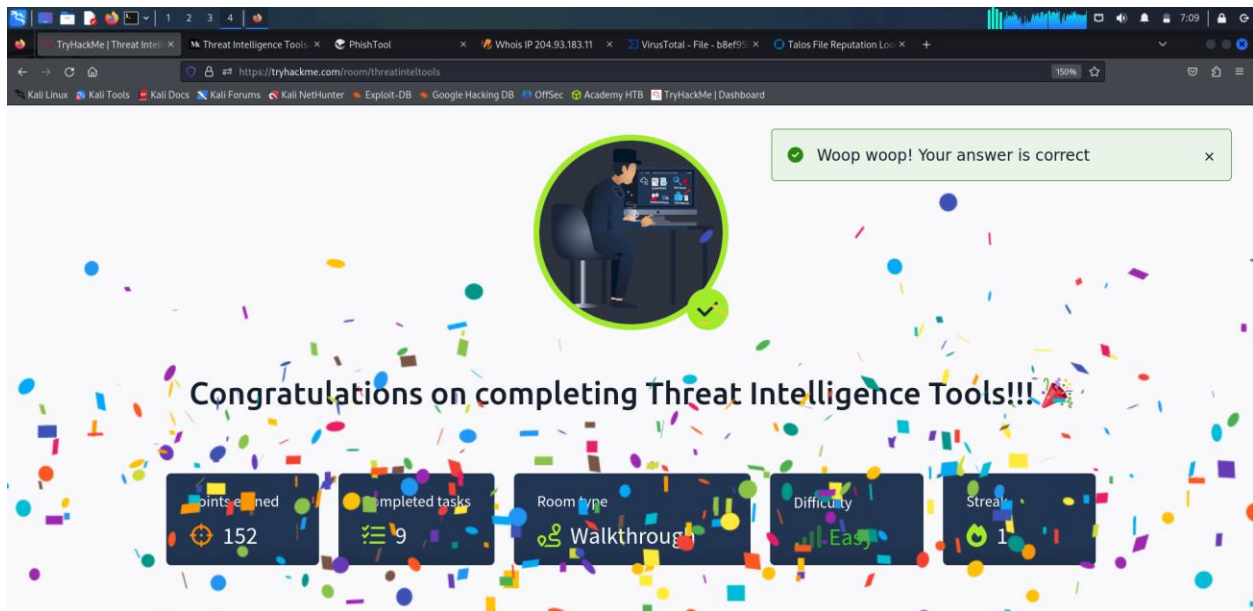

```
ubuntu@tryhackme:~$ ls
Desktop  Music  Templates  nsfinstall
Documents Pictures Videos  outgoingsmtp.json
Downloads Public go setoolkit

ubuntu@tryhackme:~/Desktop$ cd Desktop/
ubuntu@tryhackme:~/Desktop$ ls
Downloads  mails
'roforma Invoice P101092292891 TT slip pdf.rar.zip'
'Sales_Receipt 5606.xls'
'mate-terminal.desktop'
'thunderbird.desktop'

ubuntu@tryhackme:~/Desktop$ sha256sum Sales_Receipt\ 5606.xls
b8ef959a9176aef07fdca8705254a163b50b49a17217a4ff0107487f59d4a35d Sales_Receipt_5606.xls

ubuntu@tryhackme:~/Desktop$
```

5. Conclusion

Having completed this module, I now possess a clearer and more practical understanding of threat intelligence and its crucial role in cybersecurity. The hands-on experience with tools like UrlScan.io and PhishTool allowed me to apply theoretical knowledge to real-world situations, such as identifying malicious URLs and dissecting phishing emails. Exploring Abuse.ch and Talos Intelligence further deepened my ability to track malware indicators and perform threat attribution. Overall, this module not only enhanced my technical skills but also emphasized the importance of threat intelligence in building a proactive and resilient cybersecurity posture. I feel more prepared to contribute meaningfully to threat detection and intelligence efforts in a professional setting.
